3. You are required to calculate the machine hour rate from the following particulars.

- Cost of the machine $10,000 /$ - its estimated working life is 10 years and the estimated scrap value at the end of its life is 1,000 . The estimated working lime per year ( 50 weeks of 40 hours each) is 2,000 hours.
- Electricity used by the machine is 16 units per hour at the cost of 0.10 per unit.
- The machine requires a chemical solution which is replaced at the end of each week a/ cost of 20/- each time.
- The estimated cost of maintenance per year is 1200 .
- Two attendants control the operation on the machine together with five other identical machines their combined week wages amount to 120 .
- Departmental and General Works overheads allocated to the machine for the year were 2,000.
